casenote

…continuity of care

Scenario

Mary Cox (F/67 years) was rushed to a Primary Healthcare Center because she was feeling faint. The doctor noticed her blood pressure was low and immediately began intravenous fluid resuscitation while taking her history.

He discovered she was a hypertension patient who was given medications during a medical outreach which she combined with her routine drugs, unaware that the new pills were also antihypertensives.

This crashed her blood pressure almost fatally but for the timely intervention.

About

---

casenote is a highly secure online platform that

enables continuity of care by providing easy access

to health records across multiple providers.

Problem Statement

- Fragmented health records

- Duplication of clinical effort

- Poor accessibility to healthcare

- Inadequate patient engagement

- Clinical errors from poor history

Features
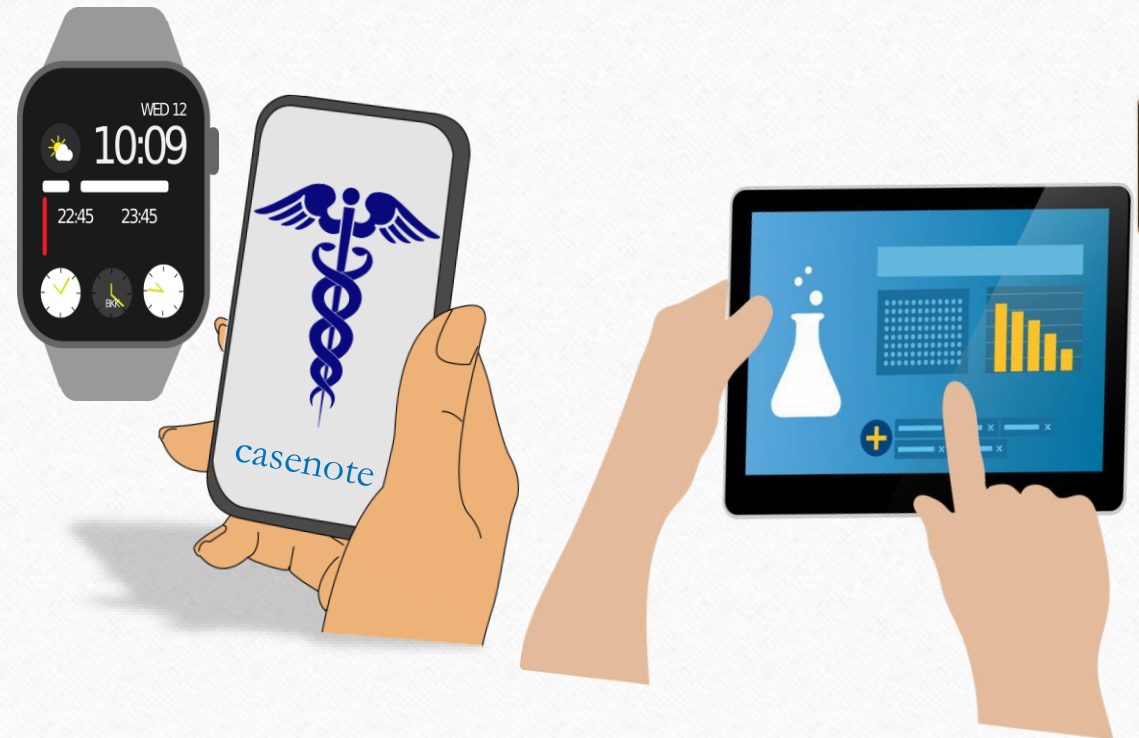

Centrally stored health data

- Health data is securely cloud stored for easy retrieval across multiple channels by multiple parties on demand at anytime.

- This assures continuity of care by different care providers & reduces duplication of effort.
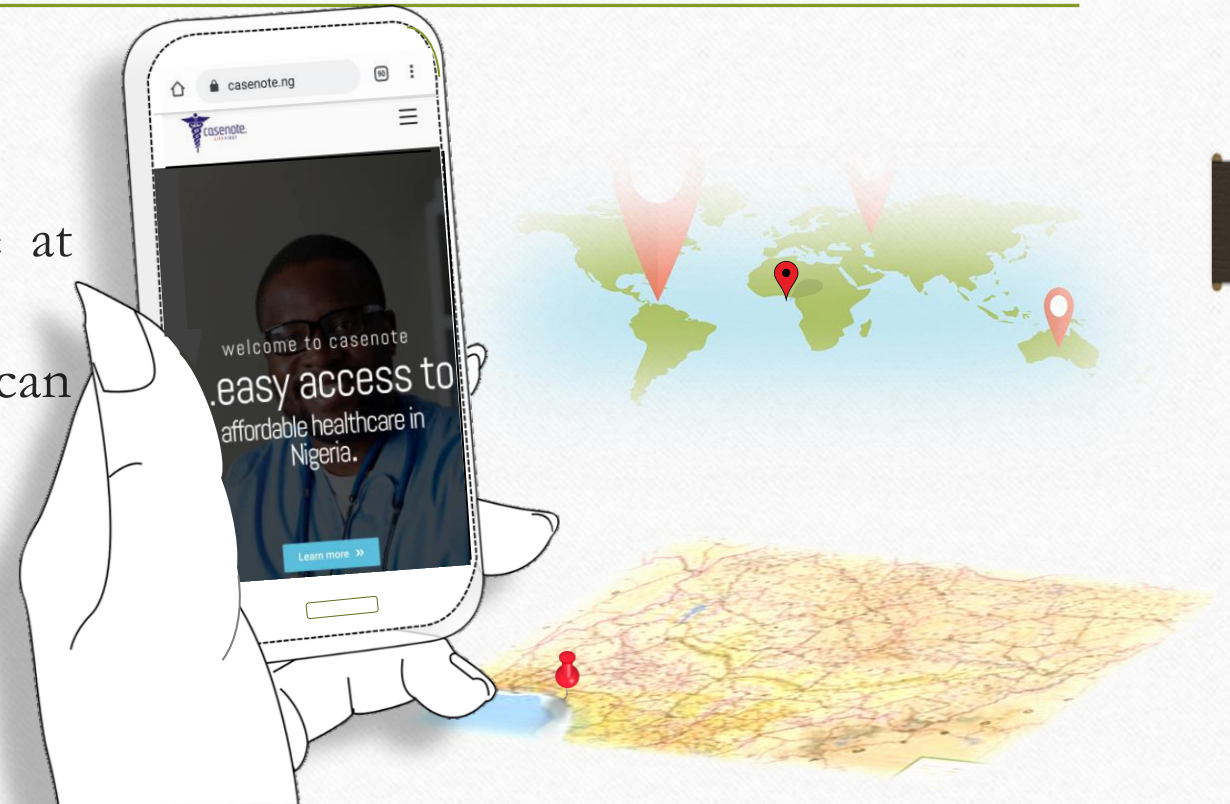

Features…

Mobile access to health records

- Patients have access to parts of their health records using mobile devices.

- Providers can monitor and dispense care remotely, using mobile devices.

Features…

Easy appointment booking

Appointment to access specialist care at

the nearest certified provider location can

be done within seconds.

Features…

Remote access to care

Health seekers can connect with their care providers using the integrated caseChat (telemedicine) feature.

Features…

Health insurance

Health seekers are provided multiple flexible health insurance options which can be seamlessly started at the click of a button.
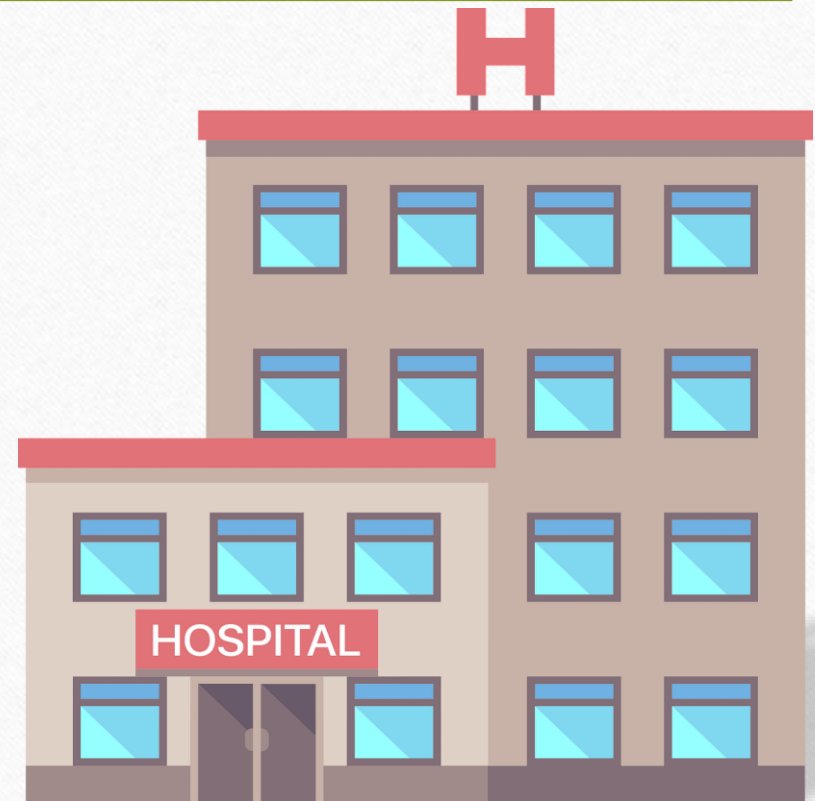

Benefits
